

## FEATURES

GARRANLOCKERS

Skid rail bottoms - One piece locker base is designed to give additional strength and also has the benefit of glides to protect the floor and allow flow of air to assist drying under the locker.

Lock enclosure - The lock enclosure is designed to fit a self-adhesive number plate or your own name card.

Integral sloping top - The sloping top is an integral part of the locker side and not an attachment that sits on the top.

Stiffened doors -All doors have full length stiffeners made of the same gauge material as the door.

Double edged pillars - Door pillars are safety edged on all exposed edges, both on hinge side and door edge for extra strength and protection.

# CLASSIC LOCKERS

Our standard classic lockers are constructed from spot welded mild steel and are available with flat or integral sloping tops.
