

The TITAN and TITAN PLUS offer a more robust locker, and are the tough guys in our brochure.

The TITAN can help eliminate the damage that can often happen when lockers are badly used. The doors and stiffeners are made from 1.2mm steel and are safety edged, then secured to specially strengthened pillars.

These lockers are ideal for schools, colleges, or any area where there is heavy usage or where damage may be a re-occurring problem.

Titan Plus

This locker offers the same range of features and sizes as the Titan but with an even heavier gauge mild steel door.

Doors and stiffeners are made from 1.5mm gauge Mild steel.

We can offer a complete range of sizes from a full length locker to a 6 tier unit, with flat or sloping top, in sizes from 1800mm x 300w x 300d to 1800 x 450w x 450d.

TITAN & TITAN PLUS LOCKERS

The TITAN and TITAN Plus range offer a more robust locker. This is ideal for schools or any area where there is heavy usage, or where damage may be a problem. There are a wide range of sizes.
